Team Name: Advait

Team Leader Name: Manas Anand

Project Name:Revolutionizing Voting with faster and secure Automated Verification

Problem Statement:

India's voting system faces challenges like voter fraud (impersonation, duplicate voting), low voter turnout, inefficiencies in booth management, lack of transparency, and security vulnerabilities in EVMs. These issues undermine electoral integrity and public trust, highlighting the need for a secure, transparent, and accessible AI-driven voting system.

Solution Declaration:

Our AI -powered blockchain protection system ensures fraud, transparent and accessible biometric authentication, AI -driven fraud detection and blockchain -backed vote storage. It allows safe online voting for seniors and physically challenges, using geographic fence voting portals, authentication of various factors and encrypted voting elections, ensuring including and transparent violation elections.

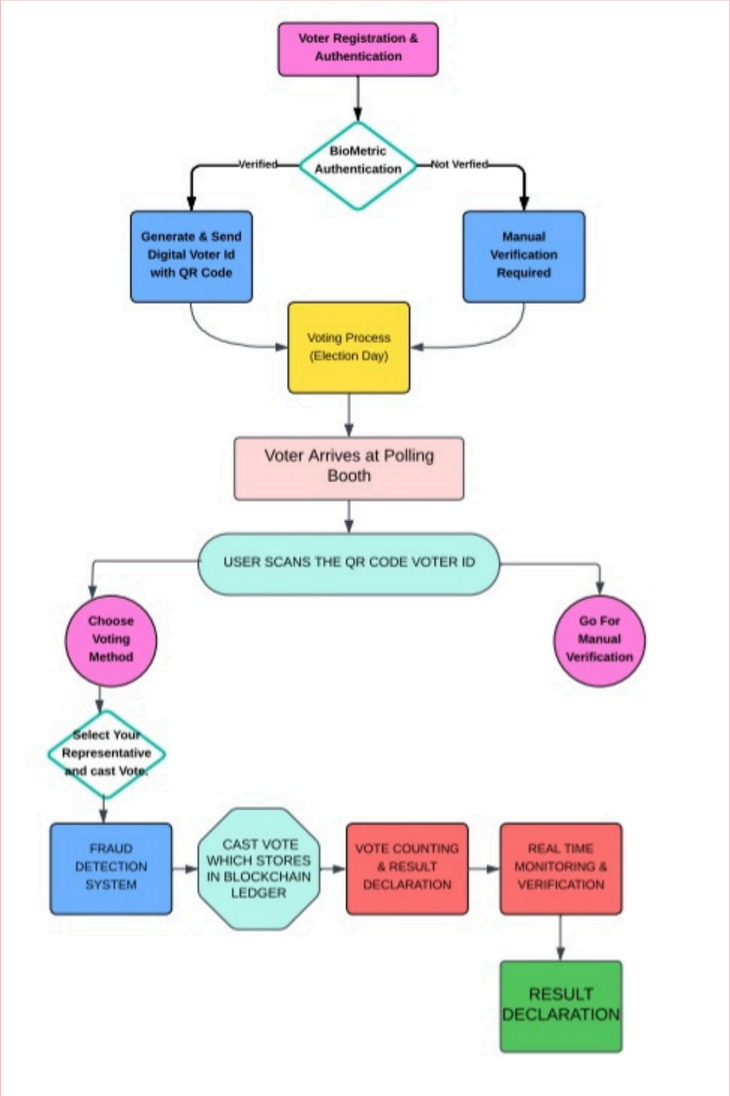
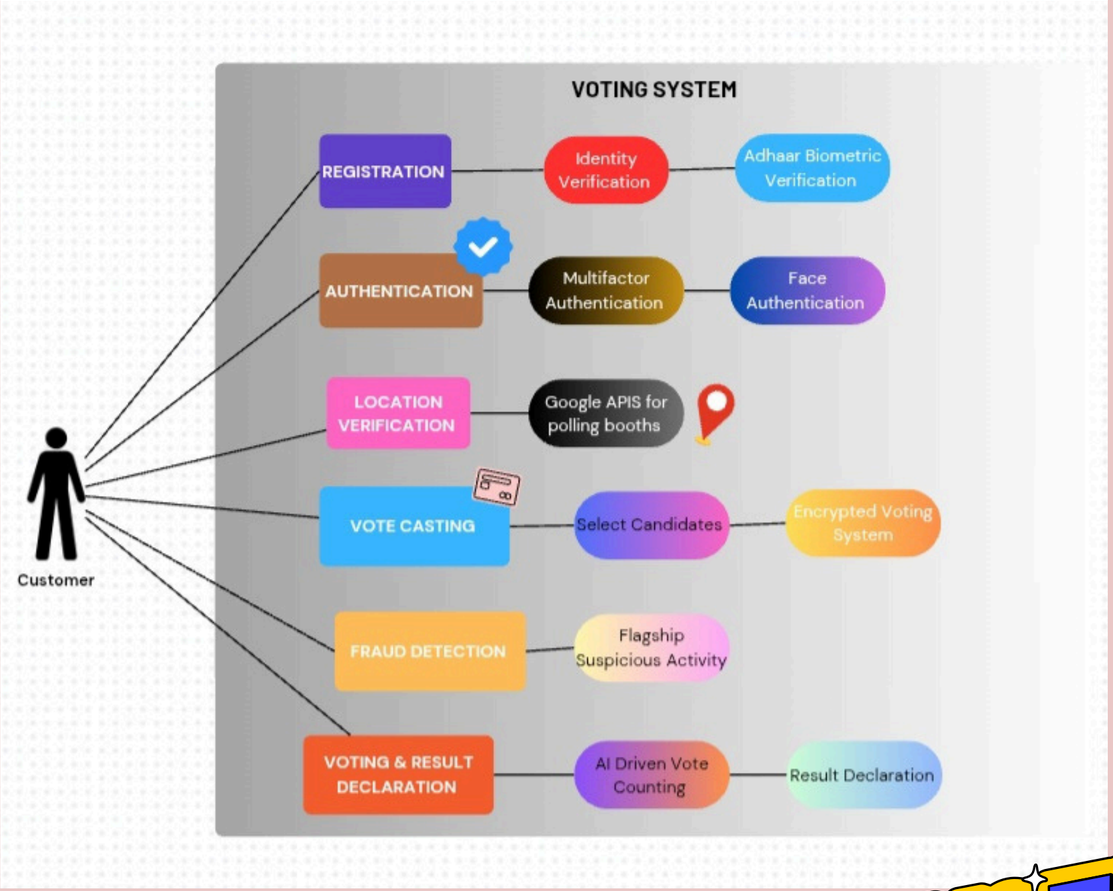
WORKFLOW



USE CASE



YOUR VOTE MATTERS

ADVANTAGES

- High Security: Biometric authentication, MFA, blockchain vote storage, AI fraud detection.
- Better Accessibility: Online voting for seniors & disabled, AI assistance, queue management.
- Full Transparency: Tamper-proof blockchain ledger, real-time monitoring, AI election insights.
- Higher Turnout: Automated reminders, AI-suggested voting times, remote voting options.
- Fast & Cost-Effective: AI-driven counting, no paper ballots, efficient election management.

DEPENDENCIES

- Safety and Authentication - AADHAAR Verification, Biometric APIs, OTP/MFA Services.
- Blockchain & Storage - blockchain ledger, smart contracts, encrypted cloud storage.
- AI and fraud detection - Livers detection, anomaly detection, duplicate voter prevention.
- Infrastructure and Network APPLICATIVE OF SAFE VOTE, API GEO-BECKING, GOOGLE MAPS.
- Electoral-AI, chatbot, smart queue management.

Revenue Model

- Government Contracts – Sell the system to election commissions for secure voting.
- Corporate Voting – Offer secure digital voting for company board elections.
- Subscription Model – Charge universities & private groups for using the voting platform.
- Blockchain Security Services – License blockchain voting tech to organizations.
- Data & Insights – Provide election trends & fraud detection reports (privacy protected).
- International Expansion – Partner with other countries to implement secure digital voting.
- Custom Solutions – Develop tailored security solutions for different voting needs.

THANK YOU
